

Lab: Efficient Algorithms for Selected Problems

Report Orga

Prof. Dr. Heiko Röglin
Joshua Könen, Sarah Sturm & Aaron Weinmann

Summer Term 2025

Final Report - Handing In

- Deadline for final reports: Sunday, 24.08.2025
- Deadline for finishing the leftover Problems: Tuesday, 29.07.2025
- Handing in via Sciebo
- Each team gets a link to their individual Sciebo folder (via mail)
- The final report has to be uploaded until midnight on the final day, later submissions will not be accepted
- Before the Deadline, the uploaded file can be deleted and re-uploaded, therefore we recommend to upload a preliminary version early on in case there are technical problems on the last day
- If there are problems with the submission: Let us know as soon as possible via mail, so we can find a solution

Final Report - Structure

- One report per group
- Please use the template which is available at eCampus
- Every member of a group is responsible for their part of the report
- Length: approx. 5 pages per group member, so in total 15 pages for groups of 3 (or 10 for groups of 2)
- In the final report it has to be clear who wrote which part (e.g. Name next to section titles)

Final Report - Structure

- Every group member should write about 2-3 Problems from the Lab
- Ideally choose problems that are connected by a common theme (problem class, solution approach, complexity etc.), so your part of the report has a recurring theme
- Only write about problems where you contributed to the solution
- No two group members should write about the same problem
- Explain on a level such that someone who did not attend the Lab can fully understand both the given problems and how you solved them
- Feel free to include pictures or other visual representations
